Reference customers	IMS Health, Webtrekk, XING, Semikron
Product	<p>EXASolution is a flexible and scalable relational database system developed especially for enterprise data warehouse applications and business intelligence solutions. With this solution, users can evaluate very large data inventories ad hoc. Typical applications are CRM analyses, scoring and ranking calculations, strategic simulations, real-time and click-stream analyses.</p> <p>The unique combination of in-memory cluster technology with innovative compression algorithms means that the performance of data warehouse processes can be increased many times over.</p> <p>In addition, users can reduce considerably the total cost of ownership for their data warehouse operations.</p> <p>The solution is integrated in the existing IT infrastructure via standard interfaces so that existing BI applications can continue to be used unchanged. In case the data volume or analysis requirements grow, the system can be easily expanded with inexpensive standard hardware.</p>

EXASOL

Services

At EXASOL, product development and service offers go hand in hand. The company's experts provide verbal and physical support to its customers, from technical consulting and system analysis right through to the implementation and operation (including hosting) of the system. EXASOL also offers comprehensive training for its customers and partners.

Brief company description

EXASOL AG is a leading provider of next generation database management systems (DBMS) for high performance data research and analysis. Thanks to its optimum support of complex utilization profiles, the company's DBMS can be used in all areas for enterprise data warehouse applications. EXASOL customers gain a decisive competitive advantage through a high performance DBMS for data analysis and decision support at optimal TCO. In 2004, EXASOL was awarded the prestigious European IST Prize for its powerful product. Currently, EXASOL is the multiple record-setter in the international TPCTM-H benchmark, which is recognized around the world as the performance test for data warehouse solutions.
