

Build an analytic enterprise with EXASOL

Choose EXASOL and we will help you to build new businesses and revenue streams that are driven by data and analytics

We help build an analytic environment right for your business

- We can help you build an analytic ecosystem by offering an agile and fully automated analytic database system that helps you to turn vast amounts of data into business value
- You can start small with EXASOL and then grow node-by-node as your data increases; the product's linear scalability allows you to grow and still maintain analytic performance
- Use EXASOL how you want to - whether as a full data warehouse solution or as an analytic mart that complements your existing solution
- Use EXASOL to build the right infrastructure - a logical data warehouse where you no longer need a central data repository but can have a more agile infrastructure

We help build decision-making processes based on data

- We can help you build an analytic environment where you push the BI, reporting and analytics down to the end-users, away from the centralized structures of the past
- With EXASOL, you can make self-service BI and analytics in your business a reality where front-line workers can interact with data themselves
- You can respond quickly to the requirements of data compliance by ensuring those that are allowed to analyze data can, and those that are not allowed cannot
- Build a data-driven business where decision-making is no longer based on gut-feel inferences, but more on information backed up by facts

We offer an openness and a level of service that is unparalleled

- At EXASOL, we are a truly independent analytic database vendor and do not have a vested interest in other technology - we are there to support you
- We offer an openness and a level of service that you cannot get with other database vendors who are more interested in tying you up in multi-year, expensive contracts
- With EXASOL, you can build the analytic environment that best fits your requirements; our openness allows to choose whatever ETL and BI front-end tool to run with EXASOL
- With little or no maintenance needed, EXASOL works automatically; therefore it frees you up to run analytics, accelerate your BI and reporting and concentrate on your business
