Innovate in your business with EXASOL

Use EXASOL to liberate your data, create new products and services, and bring innovation to your business analytics

We help you innovate in your business

- Innovate in your business by being able to understand more about your customers, prospects, operations, costs and revenues than ever before
- Create new business models, products and services and bring them to market more quickly and more efficiently through the use of high performance analytics
- Instead of looking back all the time, we offer you a solution that will help you to run more interesting predictive and prescriptive analytics projects
- EXASOL's high performance and in-memory technology allows you to do things today that you could not do with database technology before

We help our customers to become data heroes

- With support for Java, Python, R, UDFs as well as Hadoop, we enable companies to turn their staff into data experts and data heroes by unearthing business value from day one
- By offering in-database analytics, we work with organizations who are looking to harness the big data wave to identify new business opportunities and capitalize on them accordingly
- EXASOL allows you to concentrate on other things in your organization, instead of your database; concentrate on your business, not your database
- The solution's agility and flexibility allows you to focus on more interesting and valuable tasks as opposed to tuning and maintaining a database

We are innovative and allow others to benefit accordingly

- At EXASOL, we were first to market with a robust, high performance, column-based, in-memory analytic database with a series of world-class features
- Working with our customers, we allow them to benefit from this innovation on an ongoing basis; we work with them to make added features and functionality available when needed
- EXASOL believes in innovation and we actively promote it, too. We work with start-up companies who cannot afford large-scale analytic solutions but who can benefit from analytics
- We offer everyone access to a free community version of EXASOL, so why not get started today and see what kind of analytics you can do?
